Alumnae/Alumnus Profile:
Brandon Heuscher, AAS 2012

Brandon graduated from the University of Montana College of Technology in the spring of 2012 with an Associates of Applied Science in Energy Technology. Throughout the program Brandon most enjoyed the hands-on electronics lab, because through the process of building simple circuits, and using measurement tools, the overall picture of how electricity works became much clearer. He believes that when it comes to understanding electricity, this hands-on course is a must. He also enjoyed the science classes and of course the photovoltaics class, which spurred his interest in solar, and led him to his current position at Sunelco.

Sunelco is a renewable energy company in Victor, Montana that specializes in the design and installation of solar, wind, micro-hydro, and solar water pumping systems. Brandon currently works as a sales technician for Sunelco, and his typical duties include system design and sales, site surveys, the production of wiring diagrams, and system troubleshooting. He also takes part in many of the local installations, and likes to get as much time out of the office and up on the roof as possible. Working at Sunelco has been a continuing education every day, and he feels very fortunate to be learning from such a great group of coworkers who all have years of experience in the industry.

In his spare time, Brandon enjoys fishing, hunting, and growing food on his land outside Stevensville, MT. He and his wife are also raising a small flock of dairy sheep, and they are in the midst of experimenting with sheep cheese recipes. Feel free to contact Brandon with any questions at brandonheuscher@gmail.com.
